

Our Mission

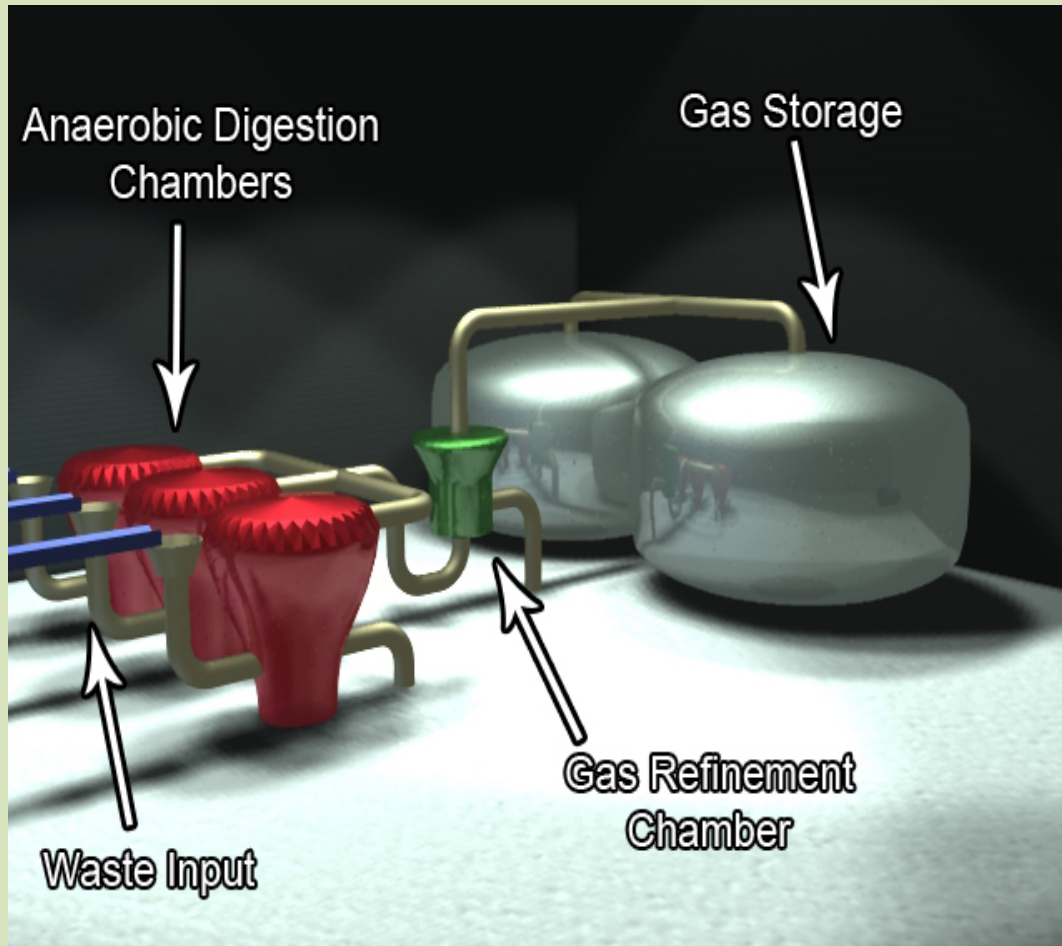

reGenerate assists in reducing food waste in Australia, through the production of environmentally sustainable natural gas, utilising profits gained to implement community-based long term development in southern Africa.

**Every year in NSW
1,000,000 tonnes of
food waste is sent
to landfill.**

– The Age, 1st May '09

Operations - gasworks

Production Plant

This model shows a prototype of the tanks and refinement apparatus that will house the anaerobic digestion process and refine the gases into commercial quality methane.

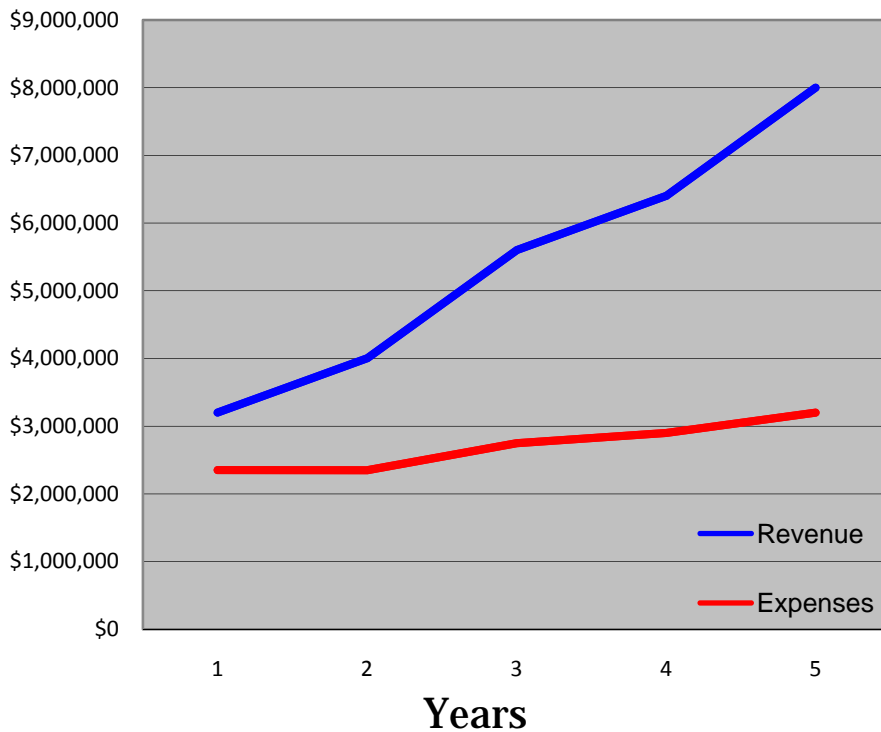

Operations - program

- Full-time employment of two South African nationals and an Australian-based **reGenerate** representative
- The program expands as each community that has been a party to the educational assistance is then represented by a volunteer who acts as an instructor to serve two more communities.
- Our ultimate aim is to institute a branch of the program in Zimbabwe, a nation in dire need of humanitarian assistance.
